FCC Statement
Supplier Declaration of Conformity (SDoC)
This product complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at their own expense.

Warning: The user is cautioned that changes and modifications made to the equipment without the approval of manufacturer could void the user’s authority to operate this equipment.

Industry Canada Regulatory Information
This Class A digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Inquiries
Contact Daktronics with any questions regarding our product compliance.

1 Introduction

This manual explains the installation of Daktronics Aquatics/Track LED Scoreboards. For additional information regarding the safety, installation, operation, or service of these displays, refer to the telephone numbers listed in Section 5: Daktronics Exchange and Repair & Return Programs (p. 24). This manual is not specific to a particular installation.

Important Safeguards

- Read and understand all instructions before beginning the installation process.
- Properly ground the cabinet with a grounding electrode at the display location.
- Disconnect the display power when not in use or when servicing.
- Disconnect the display power before servicing power supplies to avoid electrical shock. Power supplies run on high voltage and may cause physical injury if touched while powered.
- Do not modify the structure or attach any panels or coverings to the display without the express written consent of Daktronics.
- Do not disassemble control equipment or electronic controls of the display; failure to follow this safeguard will make the warranty null and void.
- Do not drop the control equipment or allow it to get wet.

Specifications Label

Power specifications as well as serial and model number information can be found on an ID label, similar to the one shown in Figure 1.

![Specifications Label](image)

Figure 1: Specifications Label

Please have the assembly number, model number, and the date manufactured on hand when calling Daktronics customer service to ensure the request is serviced as quickly as possible. Knowing the facility name and/or job number will also be helpful.

Model Descriptions

Reference Drawings:
- Module Model Descriptions .......................................................... DWG-129639
- Model Configurations, Swim / Track Timing .................................. DWG-130101
- Model Configurations, Aquatics Multisport .................................. DWG-130102

To determine which pieces make up what model and how they are arranged, refer to DWG-130101 and DWG-130102 in Appendix A. Refer also to DWG-129639 for detailed views of each display piece and add-on modules.
Introduction

Resources

Figure 2 illustrates a Daktronics drawing label. This manual refers to drawings by listing the last set of digits. In the example, the drawing would be referred to as **DWG-1007804**. All references to drawing numbers, appendices, figures, or other manuals are presented in bold typeface. Any drawings referenced in a section are listed at the beginning of it as shown below:

**Reference Drawings:**
- System Riser Diagram .................................................................................................................. **DWG-1007804**

Daktronics identifies manuals by the DD or ED number located on the cover page.

Listed below are drawing types commonly used by Daktronics, along with the information typically provided. All drawings referenced in this manual are found in the appendices.

- **Schematic Drawings:** describe internal power and signal wiring as well as interconnections between display sections; they may also include digit designations and driver addressing information
- **Shop Drawings:** describe mounting methods to structural elements, access method (front or rear), and power and signal entrance points
- **System Riser Diagrams:** describe power/signal connections between components and the control location; they may also include control room layout and schematic
- **Final Assembly Drawings:** describe internal component locations and detailed product appearance with part numbers and quantities

Project-specific information takes precedence over any other general information found in this manual. Ensure all applicable material has been gathered before beginning the installation. Contact a Daktronics sales coordinator or project manager.

**Daktronics Nomenclature**

Most display components have a white label that lists the part number (**Figure 3**). Part numbers will also appear on certain drawings. If a component is not found in the Replacement Parts (p.23), use the label to order a replacement. Refer to Section 5: Daktronics Exchange and Repair & Return Programs (p.24) if replacing or repairing any display component.

Display Controllers

The OmniSport 2000 timing console uses keyboard overlays (sport inserts) to control numerous sports and display models. Refer to the manual below for operating instructions. The manual is provided on a CD with the control consoles, and also available online at www.daktronics.com/manuals.

- OmniSport 2000 Timing Console Operation Manual (ED-13312)

It is also possible for these displays to be controlled via third-party timing consoles, such as those produced by Omega and Colorado Timing Systems (CTS). In these cases, refer to the documentation provided by the manufacturer.

Product Safety Approval

Daktronics outdoor displays are ETL-listed and tested to CSA standards for outdoor use. Contact Daktronics with any questions regarding testing procedures.
2 Mechanical Installation

Refer to the electrical installation drawing before beginning the mechanical installation procedure. It is important to recognize where the electrical wires are located so knockouts can be removed respectively before the display has been mounted. It will be easier to install electrical hookup items, route conduits, and attach hookup boxes before mechanical installation.

- For indoor scoreboards, mechanical installation typically consists of lifting and permanently mounting the scoreboard to a wall. The mechanical specification drawings listed in Appendix A show the recommended number and spacing of wall anchors for indoor scoreboard models.
- For outdoor scoreboards, mechanical installation typically consists of installing concrete footing and steel beams and mounting the scoreboard to the beams. The columns, footings, and all connection details must be designed and certified by a professional engineer licensed to practice in the state of the scoreboard installation.

Be sure that the installation complies with local building codes.

Note: Daktronics assumes no liability for any installation derived from the information provided in this manual or installations designed and installed by others.

Installing Caption Modules

Reference Drawings:
- Caption Layout- 6-Lane Multi-Sport Systems ........................................ DWG-130319
- Caption Layout- 8-Lane Multi-Sport Systems ........................................ DWG-130321
- Caption Layout- 10-Lane Multi-Sport Systems ....................................... DWG-130801
- Caption Module Detail .............................................................................. DWG-130840

Note: Attach the caption module to the digit module before attaching the digit module to the wall.

The caption modules are attached to the top or bottom of a digit module with #10 machine screws (refer to DWG-130840). Before attaching the caption module, note its orientation. The top and bottom guides for holding the caption panel are different sizes. Be sure the module is oriented so that the deeper guide is toward the top.

To insert a caption panel, fit the top edge of the caption panel into the module’s upper guide, and then slide the bottom edge under the lower guide (refer to DWG-130840). The construction of the guides allows the caption panels to be lifted out for changing, rather than having to slide them out one end.

The caption panels must be properly positioned in relation to the scoreboard digits for different activities. Refer to DWG-130319, DWG-130321, and DWG-130801 for caption layouts. The drawings indicate the proper location of the digits and caption panels that will be used for the various events and sports.
Wall Mounting Digit Modules

Due to the variety of wall materials used in sports facilities, Daktronics cannot anticipate a user’s individual installation needs or provide mounting hardware suitable for every installation. Choose a method of installation that will safely support the weight of the display.

Before installing any wall anchors or the mounting structure, determine where all of the mounting holes will be located on the display modules. Holes provided on the modules should be convenient for most installations.

For mounting locations, weights, and hardware suggestions, refer to the model-specific mechanical specification drawings listed in Appendix A.

SW-3104

Reference Drawings:
- SW-3104 Floor Stand Assy .......................................................... DWG-253540

The SW-2104 features carrying handles and may not need to be wall mounted. However, it may be mounted to a floor stand for greater stability. Refer to DWG-253540.

Vertical Wall Mounting (Indoor or Outdoor)

Reference Drawings:
- Vertical Wall Mount ........................................................................ DWG-130545

Use this method when the overall display has modules mounted on top of one another.

1. Before attaching the digit module to the wall, attach the caption module to the digit module as described in Installing Caption Modules (p.4).

   **Note:** Extra strut length is not required when caption modules are mounted at either the top or bottom of the column.

2. Attach vertical mounting struts to the wall. Strut length will vary depending on the total number of display modules. Center-to-center distance between vertical struts is 8'-10.5" (2705 mm) for 9' (2743 mm) wide modules.

3. Use 3/8" bolts to attach the modules to spring nuts in the struts (Figure 4). Mount the lowest module first, and then add modules working upward.

   **Figure 4:** Spring Nut in Strut
Horizontal Wall Mounting (Indoor Only)

Reference Drawings:
- Strut Spacing, Horizontal Wall Mounting: DWG-129905
- End Bracket Attachment, Horizontal Wall Mounting: DWG-129906
- Horizontal Wall Mounting, Final Steps: DWG-129907

Use this method when the overall display has modules mounted side by side.

1. Before attaching the digit module to the wall, attach the caption module to the digit module as described in Installing Caption Modules (p.4).

   ![Note: Extra strut length is not required when caption modules are mounted at either the top or bottom of the column.]

2. Attach mounting struts to the wall. Strut length will vary depending on the total number of display modules. Refer to DWG-129905 to determine strut length and the center-to-center distance between the struts.

3. Attach the end brackets to the right end of all the modules in the left column. Next, attach brackets to the left end of all the modules in the right column. Refer to DWG-129906.

4. Use 3/8" bolts to attach the modules in the left column to spring nuts in the struts (Figure 4). Mount the lowest module first, and then add modules working upward.

5. Starting with the bottom-right module, insert the screw heads on the end brackets of the left side of the cabinet into the keyholes on the mating bracket of the right side of the left column cabinet, and press down on the right side until both cabinets are flush and level horizontally. Refer to DWG-129907.

6. Once the right column cabinet is joined to the left column cabinet, use 3/8" bolts to attach the right end of the right column module to spring nuts in the struts (Figure 4).

7. Repeat Steps 5–6 for all remaining right column modules, working upward.

Corner-Mounting (Indoor Only)

Reference Drawings:
- Corner Mount: DWG-130508

If the display is to be mounted across the corner of adjoining walls, corner-mounting brackets may be ordered as an option. DWG-130508 details this type of mounting.

Multi-line display models that use a single vertical arrangement of modules may be mounted with corner brackets. However, horizontal display configurations cannot be mounted across a corner using the simple brackets. Such displays must be attached to a structure or framework that spans across the corner and safely supports the entire display. This type of mounting must be designed by a qualified engineer.
Beam Mounting (Outdoor)

Reference Drawings:
- Beam Mounting Procedure ................................................................. DWG-194664
- Beam Mounting, Side View ................................................................. DWG-194671
- Beam Mounting, Top View ................................................................. DWG-194674
- Beam Mounting, Rear View, Vertical Display ..................................... DWG-194677
- Beam Mounting, Rear View, Horizontal Display ............................... DWG-194678

Daktronics outdoor scoreboards are typically mounted on steel beams. Such beam-mounted installations require that a qualified engineer provide specifications for both the reinforced concrete footings and the steel support beams.

Two beams are required for each column of display modules. Beams must be set 4’-6” (1372 mm) apart, center-to-center. Installations of vertical and horizontal displays are shown in DWG-194677 and DWG-194678.

Note: Because every display is different in terms of module configuration, scoreboard options, and environments, every installation will be unique.

Once the support beams are installed, refer to DWG-194664, DWG-194671, and DWG-194674 along with the instructions below to mount the display modules to the beams.

1. Begin by attaching mounting brackets to the top and bottom of the lowest digit module in the display. The brackets are fastened to the modules by inserting 10-24 x 5/8” screws through the holes in each bracket and threading them into the captivated nuts on the back of the module.

2. With the brackets attached, position the module against the beam and secure it with the 1/2-13 x 15” threaded rods, lock washers, and nuts provided. The rods do not go through the beam but pass along either side; no drilling is required. The square nuts go inside the bracket, while the lock washers and hex nuts are used outside the rear mounting angles that straddle the back of each beam. Tighten the assembly with a 3/4” socket.

Note: Do not over tighten the assembly as it may deform the brackets and angles.

3. Attach the upper mounting brackets to the next module and position it against the beams, on top of the first module.

4. Insert screws through the upper brackets of the lower module to secure the bottom of the upper module. This secures the brackets to the back of both modules.

5. Secure the upper brackets of the upper module to the beams with bolts, washers, and nuts as described in Step 2.

6. Join the modules together at both ends by inserting screws up through the holes in the top of the lower module into the captivated nuts in the bottom of the upper module.

7. The building process continues in the same manner for all remaining modules. Caption modules are attached directly to their adjoining digit modules, similar to the process outlined in Step 6; they do not accept beam mounting brackets.
3 Electrical Installation

CAUTION: Only qualified individuals should perform routing and termination to the display. Electrical contractors are responsible for ensuring that all electrical work meets or exceeds local and national codes. Daktronics engineering staff must approve all changes or the warranty will be void.

Refer to the specification label (Figure 1) on the display to determine maximum power requirements. Ensure all external overcurrent protection meets all local and national electrical codes and is appropriately sized to the load it is terminating. Failure to meet wiring and overcurrent protection device requirements will void the warranty.

Note: Ensure the display is on a dedicated circuit. This will prevent loss of critical game/event information that may otherwise occur if another component on the same circuit should fail.

Indoor Scoreboard Power

Grounding
All components of a display system – including but not limited to displays, control equipment, and connected peripheral equipment – must be electrically grounded. Only qualified individuals may perform electrical work, including verification of ground resistance. Daktronics is not responsible for improper grounding or damage incurred as a result of improper grounding.

Grounding methods must meet the provisions of all applicable local and national codes. Inspect and verify all grounding methods meet the provisions of all applicable local and national codes.

Proper grounding is necessary for reliable equipment operation and general electrical safety. Failure to properly ground the display system may void the warranty, disrupt operation, damage equipment, and cause bodily harm or death.

Power Connection

Reference Drawings:
- Electrical Hookup- Indoor Display- 120 V ................................................... DWG-130661
- Electrical Hookup- Indoor Display- 230 V ................................................... DWG-130676

Indoor scoreboards feature a 120 VAC power cord with a three-prong plug. Install a grounded receptacle near the equipment so that the power cord can easily reach it. Displays operating on 230 VAC are also available, and they ship equipped with a universal power plug. The control console requires a 120 VAC receptacle and uses less than 1 A of power.

Note: If the power cord is not already installed, refer to DWG-130661 for 120 VAC displays or DWG-130676 for 230 VAC displays.
1. Open the bottom-left panel of the lowest digit module of the display.

2. Mount the power/signal plate in the left side of the lowest digit module of the display. Remove both the 2" knockout and the upper 7/8" knockout from the left end of the module. Route the power cord out of the module through the knockout and position the plate inside, on the end. Secure the plate with two screws, inserting them externally through the pre-drilled holes.

3. Route the cable from the power/signal plate into the driver enclosure and connect the 5-pin J51 jack to the mating P51 plug.

4. Insert 2" bushings into the holes between modules.

5. Pull the power/signal cable from the lower module through the 2" hole in the top of the cabinet up into the next module and connect the 5-pin J51 jack to the mating P51 plug in the driver enclosure.

6. Repeat the connection process in Step 5 with any other modules in the system.

7. Connect the power cord to a 120 VAC power outlet.

8. Replace the front panel. Insert a 2" plug in the bottom hole of the lowest module.

The hookup procedure for a 230 V display is identical; the only difference between the two electrical systems is the power cord. Refer to DWG-130676.

**Outdoor Scoreboard Power**

**Grounding**

All components of a display system – including but not limited to displays, control equipment, and connected peripheral equipment – must be electrically grounded. Only qualified individuals may perform electrical work, including verification of ground resistance. Daktronics is not responsible for improper grounding or damage incurred as a result of improper grounding.

Grounding methods must meet the provisions of all applicable local and national codes. Inspect and verify all grounding methods meet the provisions of all applicable local and national codes.

Proper grounding is necessary for reliable equipment operation and general electrical safety. Failure to properly ground the display system may void the warranty, disrupt operation, damage equipment, and cause bodily harm or death.

There are two types of power installation: installation with ground and neutral conductors provided, and installation with only a neutral conductor provided. These two power installations differ slightly, as described in the following subsections:

**Installation with Ground and Neutral Conductors Provided**

For this type of installation, the power circuit must contain an isolated earth-ground conductor. In this circumstance, do not connect neutral to ground at the disconnect or at the display as this would violate electrical codes and void the warranty.

Use a disconnect so that all ungrounded lines can be disconnected. The local and national electrical codes may require using a lockable power disconnect at or within sight of the display.
Installation with Only a Neutral Conductor Provided

Installations where no grounding conductor is provided must comply with local and national electrical codes. If the installation meets all requirements, observe the following guidelines:

- Connect the grounding electrode cable at the local disconnect, never at the display driver/power enclosure.
- Use a disconnect that opens all of the ungrounded phase conductors.

Lightning Protection

The use of a disconnect near the display location to completely cut all current-carrying lines significantly protects the circuits against lightning damage. Local and national electrical codes may also require it. In order for this system to provide protection, the power must be disconnected when the display is not in use.

The control console also should be disconnected from power and from the signal junction box when the system is not in use. The same surges that may damage the display components can also damage the console’s circuitry.

Installing Load Centers

Reference Drawings:
- Electrical Hookup- Outdoor Display ............................................................... DWG-129998

Outdoor displays have a fully-enclosed load center that brings power and signal to the scoreboard. The harsher environment and outdoor electrical hookup requirements mandate the use of this component. Refer to DWG-129998 along with the instructions below to mount the load center in the display during installation.

1. Remove the lower left panels from the lowest digit module in the display, and remove the nuts from the three screws already installed in the cabinet.
2. If the load center cover is on, remove it. Position the load center on the back panel screws, and complete the mounting by tightening the nuts.
3. Route the cable from the load center into the driver enclosure and connect the 5-pin J51 jack to the mating P51 plug.

Connection

Power and signal cables are routed into the display from the rear via separate conduits. All power and signal wiring terminates at the load center. Note that systems with radio control typically only require signal wiring for backup purposes.

Refer to the electrical specification drawings listed in Appendix B to locate the front access panel to the load center enclosure. Remove the screws to open the access panel. Remove the metal cover of the load center to expose the components.

Connect the appropriate wires coming through the rear of the scoreboard to the load center terminals, as described below and shown in Figure 5.

- live wire (black) to LINE 1
- neutral (white) wire to NEUT.
- ground wire (green/yellow) to the grounding buss bar
Power-On Self-Test (POST)

The display performs a self-test each time that power is turned on and the control console is powered off or not connected. If the control console is connected and powered on, the self-test does not run, and data from the control console appears on the display after a few seconds. Each self-test pattern will vary depending on the model, the number of drivers, and types of digits. Figure 6 shows an example of the LED bar test pattern that each digit performs.

Figure 5: Load Center Power Connections (Cover Removed)

Figure 6: Digit Segment POST
Indoor Signal Connection

Wired signal installation requires routing control cable from the control console to a signal junction box (J-box) near the display. At a minimum, use a paired, 22 AWG shielded cable (Daktronics part # W-1077).

1. Route signal cable in conduit from the display location to a signal junction box (J-box) or wall plate near the control location.

2. Install the 1/4" phone plug (part # 0L-40683) to the display end of the cable.

3. Insert the plug into the SIGNAL IN jack located on the left side of the display.

   **Note:** If the signal jack is not already installed, refer to Power Connection (p.8).

4. Connect a signal cable from the J-box or wall plate on the control console end to the J1, J2, or J3 jack on the back of the OmniSport 2000 console.
   - If using a Main Clock Start/Stop Switch (part # 0A-1166-0003), connect it to the J8 jack on the OmniSport 2000 console.
   - If using a Shot Clock Start/Stop Switch (part # 0A-1196-0031), connect it to the J9 jack on the OmniSport 2000 console.

Outdoor Signal Connection

Route copper signal cable through the conduit knockout on the rear of the display to the signal surge arrester card (Figure 7), located in the load center.

At the SIGNAL IN terminal block, connect red signal wire to positive (+) and black signal wire to negative (–).

   **Note:** Ensure shield (silver) wire is properly connected to the SHIELD terminal.

At a minimum, single-pair, shielded cable, 22 AWG (part # W-1077) is recommended.

Install an indoor or outdoor 1/4" J-box as needed at the control location, and connect a signal cable from the J-box on the control console end to the J1, J2, or J3 jack on the back of the OmniSport 2000 console.

   - If using a Main Clock Start/Stop Switch (part # 0A-1166-0003), connect it to the J8 jack on the OmniSport 2000 console.
   - If using a Shot Clock Start/Stop Switch (part # 0A-1196-0031), connect it to the J9 jack on the OmniSport 2000 console.
Wireless Signal Connection

Reference Drawings:
Aquatics- Radio Hookup ................................................................. DWG-305509

A wireless radio system requires an OmniSport 2000 control console equipped with a radio transmitter as well as a radio receiver plugged into the 6-pin J21 jack on the primary driver and mounted internally to the front panel of the display. Refer to DWG-305509 in Appendix B for radio receiver installation instructions for both indoor and outdoor scoreboard models. For more information, refer to the Gen VI Radio Installation Manual (DD2362277), provided with the receiver unit and available online at www.daktronics.com/manuals.

Internal Cable Routing (Horizontal Models Only)

Reference Drawings:
Internal Cable Routing.............................................................................. DWG-130679

Horizontal, or side-by-side, modules require installation of a power/signal interconnect cable. Only one interconnect cable is needed for each installation. Refer to DWG-130679.

Connect the modules by running the interconnect cable from the driver of the bottom left module to the driver of the bottom right module. There are knockouts in the ends of the modules through which the cable may be run. The cable is connected with mating 5-pin plugs in each module.

Setting the Driver Address

Each driver in a scoreboard module must be set to receive the correct signal input, or address, for the control system being used.

Addresses are set through the S2 (L) and S3 (H) rotary switches on the driver (Figure 8) using a small flathead screwdriver.

Refer to the tables on the following pages to determine the correct driver address settings based on the control system in use.

Figure 8: Driver Address Dials

# Troubleshooting

Disconnect power before doing any repair or maintenance work on the display. Permit only qualified service personnel to access internal display electronics. Disconnect power when not using the display.

## Troubleshooting Table

This section lists potential problems with the system, indicates possible causes, and suggests corrective action. This list does not include every possible problem, but it does represent some of the more common situations that may occur.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Solution/Items to Check</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display does not light, and console does not work</td>
<td>No power to the display</td>
<td>Check that the main circuit breaker for the display is on.</td>
</tr>
<tr>
<td></td>
<td>No power to the control console</td>
<td>Ensure the console is plugged into a 120 or 240 VAC power supply.</td>
</tr>
<tr>
<td>Display digits do not light, but console works</td>
<td>No wired signal from control console</td>
<td>Check that the display is receiving 120 or 240 VAC power. Check that the red DS5 LED on the driver lights up when sending commands from the console. See <a href="#">LED Drivers (p.20)</a>.</td>
</tr>
<tr>
<td></td>
<td>No radio signal from control console</td>
<td>Verify that both the console and display antennas are securely tightened and in a vertical position. Keep the console 20–500' (6–152 m) away indoors or 20–1500' (6–457 m) outdoors. Check that the green POWER and amber RADIO IN RANGE indicators on the radio receiver in the display light up when the control console is powered on. Refer to <a href="#">Radio Connections (p.21)</a>. Move the console 20–30' (6–9 m) from the display and test again. Replace the radio receiver.</td>
</tr>
<tr>
<td></td>
<td>No signal to driver</td>
<td>Check that the display is receiving 120 or 240 VAC power. Check that the red DS5 LED on the driver lights up when sending commands from the console. See <a href="#">LED Drivers (p.20)</a>. Exchange the driver with a working one of the same part #. Replace if necessary. See <a href="#">LED Drivers (p.20)</a>.</td>
</tr>
<tr>
<td></td>
<td>No power to driver</td>
<td>Check that the red DS8 LED on the driver remains lit up when the display is powered on. See <a href="#">LED Drivers (p.20)</a>.</td>
</tr>
<tr>
<td>Problem</td>
<td>Possible Cause</td>
<td>Solution/Items to Check</td>
</tr>
<tr>
<td>---------------------------------------------</td>
<td>---------------------------------------</td>
<td>-----------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Display digits light, but not in the correct order</td>
<td>Incorrect sport code</td>
<td>Ensure the correct sport code is being used for the display model. Refer to the appropriate console operation manual. See Display Controllers (p.3).</td>
</tr>
<tr>
<td></td>
<td>Incorrect driver address</td>
<td>Ensure all drivers are set to the correct address. See Setting the Driver Address (p.13).</td>
</tr>
<tr>
<td>Digits light, console works, but nothing displays</td>
<td>No wired signal from control console</td>
<td>(see solution on previous page)</td>
</tr>
<tr>
<td></td>
<td>No radio signal from control console</td>
<td>(see solution on previous page)</td>
</tr>
<tr>
<td></td>
<td>Bad/damaged field wiring</td>
<td>Check that the red DSS LED on the driver lights up when sending commands from the console. See LED Drivers (p.20).</td>
</tr>
<tr>
<td>Display works, but some LEDs always stay on</td>
<td>Short in digit circuit</td>
<td>Exchange the digit with a working one of the same part # to verify the problem. Replace if necessary. See Replacing Digits (p.19).</td>
</tr>
<tr>
<td>Display works, but some LEDs do not light or they blink</td>
<td>Bad connection</td>
<td>Verify the connector on the back of the digit circuit board is secure.</td>
</tr>
<tr>
<td></td>
<td>Bad digit or driver</td>
<td>Exchange the digit or driver with a working one of the same part # to verify the problem. Replace if necessary. See Replacing Digits (p.19) or LED Drivers (p.20).</td>
</tr>
<tr>
<td>Display works, but some digits do not light</td>
<td>Bad digit or driver</td>
<td>(see solution above)</td>
</tr>
<tr>
<td></td>
<td>Incorrect sport code</td>
<td>(see solution above)</td>
</tr>
<tr>
<td></td>
<td>Incorrect driver address</td>
<td>(see solution above)</td>
</tr>
<tr>
<td></td>
<td>Wrong console controlling the display</td>
<td>Another console’s radio signal may be transmitting to the display. Change the radio settings as described in Radio Connections (p.21).</td>
</tr>
<tr>
<td></td>
<td>Radio Interference</td>
<td>There may be other radio transmissions in the area that overpower the console. If it is not possible to disable the interfering device, it may be necessary to run a wired signal connection instead.</td>
</tr>
<tr>
<td>Display works, but one section of digits does not light</td>
<td>Bad multi-section connection</td>
<td>Verify power/signal interconnects between display sections are properly connected.</td>
</tr>
<tr>
<td></td>
<td>Bad transformer</td>
<td>Exchange the transformer with a working one of the same part # to verify the problem. Replace if necessary.</td>
</tr>
</tbody>
</table>
Component Locations & Access

All internal electronic components and digits are reached by opening a digit/access panel on the front of the display. Component location varies with each model, but drivers and power and signal components are typically mounted behind the second panel from the left in the module. Refer to the electrical specification drawings listed in Appendix B for precise component locations.

Digit/access panels are held in place on the display face by screws. To remove a panel, simply unfasten the screws and carefully lift it from the cabinet.

Note: If the panel is not held in place when the screws are removed, it could drop and possibly damage LEDs or the digit harness.

When closing a digit/access panel, make sure all screws are holding it firmly in place to prevent excessive moisture and debris from entering the display.

Replacing Digits

Digits consist of a circuit board with embedded LEDs mounted to a black polycarbonate tray and encased in protective gel as shown in Figure 9. One or more digits may be secured to a single face panel. Do not attempt to remove individual LEDs; in the case of a malfunctioning LED or digit segment, replace the entire digit.

Figure 9: Weather-Sealed Digit Panel Assembly
To replace a digit:

1. Open the digit panel as described in Component Locations & Access (p.19).
2. Disconnect the 9-pin plug from the back of the digit by squeezing the locking tabs together and pulling the connector free.
3. Use a 9/32" nut driver to remove the nuts securing the digits to the inside of the panel, and then lift the digit off the stud inserts.
4. Position a new digit over the studs, and then tighten the nuts.
5. Reconnect the 9-pin plug. This is a keyed connector and it will attach in one way only. Do not force the connection.
6. Secure the digit panel to the display face with the screws, and then power up and test the display to verify the issue has been resolved.

**Segmentation & Digit Designation**

**Reference Drawings:**
Segmentation, 7 Segment Bar Digit ................................................... DWG-38532

In each digit, certain LEDs always go on and off together. These groupings of LEDs are referred to as segments. DWG-38532 in Appendix B details which connector pin is wired to each digit segment and the wiring color code used throughout the display.

The Electrical Specification drawings in Appendix B also specify the driver connectors controlling the digits. Numbers shown in the upper half of each digit indicate which connector is wired to that digit.

**LED Drivers**

LED drivers perform the task of switching digits on and off within the display. LED drivers are mounted to a driver tray inside a protective enclosure. Refer to Figure 10 to view the location and components of a driver tray.

![Driver Tray Components (Enclosure Cover Removed)](image)

**Figure 10: Driver Tray Components (Enclosure Cover Removed)**

When troubleshooting driver problems, several LEDs provide diagnostic information.

**Note:** While it is necessary to have the display powered on to check the LED status indicators, always disconnect power before servicing.
### Troubleshooting

#### LED Function Operation Summary

<table>
<thead>
<tr>
<th>LED</th>
<th>Function</th>
<th>Operation</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>DS1</td>
<td>Radio/RS-232 RX</td>
<td>Blinking or off</td>
<td>DS1 will be blinking when the driver is receiving radio signal and off when there is no signal.</td>
</tr>
<tr>
<td>DS2</td>
<td>Status</td>
<td>Blinking</td>
<td>DS2 will be blinking at one second intervals to indicate the driver is running.</td>
</tr>
<tr>
<td>DS5</td>
<td>Signal RX</td>
<td>Blinking or off</td>
<td>DS5 will be blinking when the driver is receiving current loop signal and off when there is no signal.</td>
</tr>
<tr>
<td>DS8</td>
<td>Power</td>
<td>Steady on</td>
<td>DS8 will be on and steady to indicate driver has power.</td>
</tr>
</tbody>
</table>

#### Replacing a Driver

1. Open the access panel nearest the driver as described in **Component Locations & Access** (p.19).
2. Remove the metal cover of the driver enclosure by lifting it up, then back and down to expose the driver components.
3. Disconnect all plugs from the driver by squeezing the locking tabs together and pulling the connectors free. It may be helpful to label the cables or take a picture to know which plug goes to which jack when connecting the replacement driver.
4. Remove the nuts securing the driver to the driver tray.
5. Carefully lift the driver from the display and place it on a clean, flat surface.
6. Position a new driver over the screws and tighten the nuts.
7. Reconnect all plugs to their mating jacks on the driver. The connectors are keyed and will attach in one way only. Do not force the connections.
8. Ensure the new driver is set to the correct address. This will be the same address of the old driver being replaced. Refer to **Setting the Driver Address** (p.13).
9. Put the metal cover back on the enclosure, securely close the access panel, and then power up and test the display to verify the issue has been resolved.

#### Radio Connections

**Reference Drawings:**
- Aquatics- Radio Hookup ................................................................. **DWG-305509**

If a radio receiver needs to be installed, refer to **DWG-305509** in **Appendix B**.

To determine the radio connection settings between the display and control console, first power off any radio-equipped consoles in the area, then cycle power to the display, and watch for the radio settings.

These settings appear in different locations based on the scoreboard layout, but typically in the first four digits of a standard lane module.

The scoreboard will display “bX CY” where X is the Broadcast group number and Y is the Channel number. The default is b1C1.

If these settings do not appear, the radio receiver may need to be repaired/replaced.

To make sure the console radio settings match the receiver in the display, refer to the appropriate control console manual listed in **Display Controllers** (p.3).
Troubleshooting

Radio Interference

If it has been determined that a nearby display’s radio signal is interfering, the settings of the radio receiver or wireless base station inside the display(s) must be changed.

1. To locate the radio receiver or base station, simply look for the black antenna sticking out the front of the display.

2. Open the access panel to which the receiver is attached as described in Component Locations & Access (p.19).

3. The radio receiver has a plastic cover with a window to view status indicators (Figure 11).

   Note: While it is necessary for the display to be powered on to check the indicators, always disconnect power before servicing.

4. Remove the four screws in each corner using a #2 Philips screwdriver and lift off the cover.

5. Use a small flathead screwdriver to set the CHAN and BCAST switches to a new channel and broadcast group (1-8) as needed. Be sure to always leave FUNC set to “1”. Refer to Figure 12.

6. Screw the cover back on and securely close the access panel.

7. Enter the correct sport code and new radio settings into the console to test the radio control. Refer to the appropriate control console manual listed in Display Controllers (p.3).

For more information, refer to the Gen VI Radio Installation Manual (DD2362277), available online at www.daktronics.com/manuals.

Schematics

For advanced troubleshooting and repair, it may be necessary to consult the schematic drawings. Listed in Appendix B, schematic drawings show detailed power and signal wiring diagrams of internal display components such as drivers, horn interface cards, and transformers as well as optional components like radio receivers.
Replacement Parts

The following table contains display components that may require replacement. Many of the other components will have attached part number labels.

<table>

Daktronics Exchange and Repair & Return Programs

Exchange Program
The Daktronics Exchange Program is a service for quickly replacing key components in need of repair. If a component fails, Daktronics sends a replacement part to the customer who, in turn, returns the failed component to Daktronics. This decreases equipment downtime. Customers who follow the program guidelines explained below will receive this service.

Before contacting Daktronics, identify these important numbers:

Model Number: ______________________________________________________________________

Assembly Number: ___________________________________________________________________

Job/Contract Number: ________________________________________________________________

Date Manufactured/Installed: _________________________________________________________

Daktronics Customer ID Number: ______________________________________________________

To participate in the Exchange Program, follow these steps:

1. **Call Daktronics Customer Service.**

<table>
<thead>
<tr>
<th>Market Description</th>
<th>Customer Service Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Schools (including community/junior colleges), religious organizations, municipal</td>
<td>877-605-1115</td>
</tr>
<tr>
<td>clubs, and community centers</td>
<td>Fax: 605-697-4444</td>
</tr>
<tr>
<td>Universities and professional sporting events, live events for auditoriums, and</td>
<td>866-343-6018</td>
</tr>
<tr>
<td>arenas</td>
<td>Fax: 605-697-4444</td>
</tr>
</tbody>
</table>

2. **When the new exchange part is received, mail the old part to Daktronics.**

   If the replacement part fixes the problem, send in the problem part being replaced.
   
   a. Package the old part in the same shipping materials in which the replacement part arrived.
   b. Fill out and attach the enclosed UPS shipping document.
   c. Ship the part to Daktronics.

3. **The defective or unused parts must be returned to Daktronics within 5 weeks of initial order shipment.**

   If any part is not returned within five (5) weeks, a non-refundable invoice will be presented to the customer for the costs of replenishing the exchange parts inventory with a new part. Daktronics reserves the right to refuse parts that have been damaged due to acts of nature or causes other than normal wear and tear.
Repair & Return Program
For items not subject to exchange, Daktronics offers a Repair & Return Program. To send a part for repair, follow these steps:

1. **Call or fax Daktronics Customer Service.**
   Refer to the appropriate number in the chart on the previous page.

2. **Receive a case number before shipping.**
   This expedites repair of the part.

3. **Package and pad the item carefully to prevent damage during shipment.**
   Electronic components, such as printed circuit boards, should be placed in an antistatic bag before boxing. Daktronics does not recommend using packing peanuts when shipping.

4. **Enclose:**
   - name
   - address
   - phone number
   - the case number
   - a clear description of symptoms

</tbody>
</table>

CAPTION MODULES MOUNT TO THE ADJACENT DIGIT MODULE AND DO NOT REQUIRE EXTRA STRUT LENGTH WHEN THEY ARE MOUNTED AT THE TOP OR BOTTOM OF THE COLUMN.

AUXILIARY SCORING MODULES OR AD PANELS WILL REQUIRE ADDITIONAL STRUT LENGTH.

INSTALLING AN OPTIONAL MESSAGE CENTER IS SIMILAR, BUT REQUIRES DIFFERENT STRUT SPACING.

SEE DRAWINGS 1153-R10A-129906 AND 1153-R10A-129907 FOR OTHER STEPS IN HORIZONTAL WALL MOUNTING.
THIS IS STEP 2 FOR HORIZONTAL MOUNTING TO A WALL.

ATTACH END BRACKETS TO THE END OF EACH OF THE MODULES, ON THE END THAT WILL BE UP AGAINST THE OTHER COLUMN OF MODULES.

1-LINE MODULES USE ONE BRACKET.
2-LINE MODULES USE TWO BRACKETS.

SEE DRAWINGS 1153-R10A-129905 AND 1153-R10A-129907 FOR OTHER STEPS IN HORIZONTAL WALL MOUNTING.
THIS IS STEP 3 FOR HORIZONTAL MOUNTING TO A WALL.

INSTALL THE MODULES IN THE LEFT COLUMN BY JOINING THE MOUNTING HOLES IN THE BACK OF EACH MODULE TO THE MOUNTING STRUT. START AT THE BOTTOM AND WORK UP.

CAPTION MODULES ATTACH TO THE ADJACENT DIGIT MODULE AND DO NOT NEED TO BE ATTACHED TO THE STRUTS.

MOUNTING STRUT BY OTHERS TYP. Ø.3

STARTING AT THE BOTTOM, INSTALL THE MODULES IN THE RIGHT COLUMN.

JOIN THE END BRACKETS BY INSERTING THE SCREW HEADS INTO THE KEYHOLES IN THE MATING BRACKET, THEN PRESS DOWN.

ATTACH THE RIGHT END OF EACH MODULE TO THE MOUNTING STRUT.

SEE DRAWINGS 1153-R10A-129905 AND 1153-R10A-129906 FOR OTHER STEPS IN HORIZONTAL WALL MOUNTING.
### SWIM / TRACK TIMING MODELS

The digits represented with dashed lines are not used in that mode.

The diving mode is shown in a five-judge configuration.
IF THE DISPLAY IS MOUNTED DIRECTLY TO THE WALL, THE DISTANCE FROM THE MOUNTING HOLE ON THE BRACKET TO THE CORNER OF THE STRUCTURE IS 79.40".

ATTACH EACH MODULE IN THE SYSTEM TO THE MOUNTING STRUCTURE. DO NOT RELY ON THE SCREWS THAT ARE USED TO INTERCONNECT THE MODULES TO SUPPORT EACH MODULE'S WEIGHT.

THE MOUNTING HARDWARE KIT PROVIDED DOES NOT INCLUDE STRUTS OR HARDWARE FOR ATTACHING BRACKETS TO THE STRUTS.

**Notes:**

- The digits represented with dashed lines are not used in that mode.
- The diving mode is shown in a five judge configuration.
INSERT THE TOP OF THE CAPTION PANEL INTO THE UPPER GUIDE IN THE MODULE. LIFT, PRESS BACK, AND DROP INTO THE BOTTOM GUIDE.

ATTACH THE CAPTION MODULE TO THE TOP OR BOTTOM OF THE ADJACENT DIGIT MODULE, USING THE #10 SCREWS PROVIDED.

NOTE THAT THE UPPER GUIDE IS DEEPER THAN THE BOTTOM GUIDE. BE SURE THAT THE MODULE IS ORIENTED CORRECTLY WHEN INSTALLING.
BEAM MOUNTING PROCEDURE:

THE CIRCLED NUMBERS IN THE DRAWING REFER TO THE STEPS OF THIS PROCEDURE.

ONLY ONE BEAM IS SHOWN, TWO BEAMS REQUIRED FOR EACH COLUMN OF DISPLAY MODULES. BEAMS MUST BE SET 4"-6" APART, CENTER TO CENTER.

1. ATTACH MOUNTING BRACKETS TO THE TOP AND BOTTOM OF THE LOWEST DISPLAY MODULE IN THE SYSTEM BY INSERTING SCREWS THROUGH THE HOLES IN THE BRACKET AND THREADING INTO THE CAPTIVATED NUTS IN THE BACK OF THE MODULE.

2. POSITION THAT MODULE AGAINST THE BEAMS AND SECURE TO THE BEAM WITH THE BOLTS, WASHERS, AND NUTS PROVIDED. THE SQUARE NUTS GO INSIDE THE BRACKET, AND THE HEX NUTS AND WASHERS ARE USED INSIDE THE REAR ANGLE AT THE BACK OF THE BEAM.

USE A 3/4" SOCKET TO TIGHTEN. CAUTION: DO NOT OVERTIGHTEN AND DEFORM THE BRACKET OR ANGLES.

3. ATTACH THE UPPER MOUNTING BRACKET TO THE NEXT MODULE AND SET IT ON TOP OF THE FIRST MODULE.

4. INSTALL SCREWS THROUGH THE BRACKET TO SECURE THE BOTTOM OF THE SECOND MODULE.

5. SECURE THE UPPER BRACKET TO THE BEAMS WITH THE BOLTS, WASHERS, AND NUTS.

7. CONTINUE BUILDING UP IN THIS MANNER FOR ANY REMAINING MODULES IN THE SYSTEM. CAPTION MODULES ARE ATTACHED ONLY TO THE ADJACENT DIGIT MODULES, AND DO NOT ACCEPT BEAM MOUNTING BRACKETS.

SEE DRAWING 1153-R10A-194671 FOR A SIDE VIEW AND DETAILS.
A TYPICAL INSTALLATION MAY BE MADE UP OF 1- & 2-LINE MODULES AND CAPTION MODULES. THEIR SPECIFIC LOCATIONS ARE DETERMINED BY THE SYSTEM SPECIFICATIONS. ONLY ONE OF EACH IS SHOWN HERE.

THESE SCREWS ARE USED TO SECURE THE BRACKETS TO THE BACK OF THE MODULES, AND TO JOIN MODULES TOGETHER AT THE ENDS.

MAX POWER DEMAND: 200 W
**PROCEDURE**

1. Mount the load center in the lowest module in the display. Remove the nuts from three screws in the module, position the load center on the screws, and secure with the nuts to mount.

2. Route the cable from the load center into the drive enclosure and connect the J51 jack to the mating P51 plug.

3. Insert 2" bushings into the holes between modules.

4. Pull the power/signal cable from the lower module up into the next module and connect the J51 jack to the mating P51 plug.

5. Repeat this connection for the other modules.

6. Make main power and signal connections in the load center.

7. Replace covers and panels.

2-LINE MODULE (SHOWN WITH THE LOWER LEFT PANELS REMOVED)

INSTALL A 2" HOLE PLUG IN THE BOTTOM HOLE OF THE BOTTOM MODULE.

REMOVE THE 2" AND UPPER 7/8" KNOCKOUTS FROM THE LEFT SIDE OF THE MODULE.

ROUTE THE CABLE FROM EACH MODULE UP INTO THE NEXT MODULE AND CONNECT TO THE MATING CONNECTOR.

1-LINE MODULE (SHOWN WITH THE LEFT FRONT PANELS REMOVED)

POWER/SIGNAL
PLATE, 120V AC
(0A-1782-0501)
(0A-1153-0105
PRIOR TO APRIL 2015)

INSTALL A 2" BUSHING IN THE BOTTOM HOLE OF EACH MODULE BEFORE ROUTING WIRES. (IF NOT ALREADY INSTALLED)

PROCEDURE

2. ROUTE THE CABLE FROM THE POWER/SIGNAL PLATE INTO THE DRIVER ENCLOSURE AND CONNECT THE J51 JACK TO THE MATING P51 PLUG.

3. INSERT 2" BUSHINGS INTO THE HOLES BETWEEN MODULES.

4. PULL THE POWER/SIGNAL CABLE FROM THE LOWER MODULE UP INTO THE NEXT MODULE AND CONNECT THE J51 JACK TO THE MATING P51 PLUG.

5. REPEAT THIS CONNECTION FOR THE OTHER MODULES.

6. CONNECT THE POWER CORD TO 120V AC POWER, AND CONNECT SIGNAL TO THE 1/4" PHONE JACK IN THE END OF THE BOTTOM MODULE.

7. REPLACE COVERS AND PANELS.
PROCEDURE

1. Mount the power/signal plate in the lowest module in the display. Remove the 2" knockout and the upper 7/8" knockout from the left end of the module, position the plate inside the end, and secure with two screws.

2. Route the cable from the power/signal plate into the driver enclosure and connect the J51 jack to the mating P51 plug.

3. Insert 2" bushings into the holes between modules.

4. Pull the power/signal cable from the lower module up into the next module and connect the J51 jack to the mating P51 plug.

5. Repeat this connection for the other modules.

6. Connect the power cord to 230V AC power, and connect signal to the 1/4" phone jack in the end of the bottom module.

7. Replace covers and panels.
The display shown is a 6-line horizontal display, model SW-2106, with a model SW-2006 event/heat module atop the left side. Models vary in configuration, and each installation may be different, depending on optional equipment. The wiring method is the same for all models.

If the top section is a digit module, install the 3-piece hole seal (HS-1332) in the top.

If the top section is a caption module or an ad panel, install a plastic hole plug in the top.

The display includes a heat section, lane place, and time sections. Each digit module has a cable to be routed up to the next section. Connect the J51 jack to the mating P51 plug in the driver enclosure.

On horizontal displays, install the interconnect cable (OA-1782-0227) (OA-1153-0122 prior to April 2015) from the bottom left digit module to the bottom right digit module. Connect the J52 jack to the mating P51 plug.

C Daktronics Warranty & Limitation of Liability

This section includes the Daktronics Warranty & Limitation of Liability statement (SL-02374).
This page intentionally left blank.
This Warranty and Limitation of Liability (the “Warranty”) sets forth the warranty provided by Daktronics with respect to the Equipment. By accepting delivery of the Equipment, Purchaser and End User agree to be bound by and accept these terms and conditions. Unless otherwise defined herein, all terms within the Warranty shall have the same meaning and definition as provided elsewhere in the Agreement.

DAKTRONICS WILL ONLY BE OBLIGATED TO HONOR THE WARRANTY SET FORTH IN THESE TERMS AND CONDITIONS UPON RECEIPT OF FULL PAYMENT FOR THE EQUIPMENT

1. Warranty Coverage.
   A. Daktronics warrants to the original end user (the “End User”, which may also be the Purchaser) that the Equipment will be free from Defects (as defined below) in materials and workmanship for a period of one (1) year (the “Warranty Period”). The Warranty Period shall commence on the earlier of: (i) four weeks from the date that the Equipment leaves Daktronics’ facility; or (ii) Substantial Completion as defined herein. The Warranty Period shall expire on the first anniversary of the commencement date.

   “Substantial Completion” means the operational availability of the Equipment to the End User in accordance with the Equipment’s specifications, without regard to punch-list items, or other non-substantial items which do not affect the operation of the Equipment

   B. Daktronics’ obligation under this Warranty is limited to, at Daktronics’ option, replacing or repairing, any Equipment or part thereof that is found by Daktronics not to conform to the Equipment’s specifications. Unless otherwise directed by Daktronics, any defective part or component shall be returned to Daktronics for repair or replacement. This Warranty does not include on-site labor charges to remove or install these components. Daktronics may, at its option, provide on-site warranty service. Daktronics shall have a reasonable period of time to make such replacements or repairs and all labor associated therewith shall be performed during regular working hours. Regular working hours are Monday through Friday between 8:00 a.m. and 5:00 p.m. at the location where labor is performed, excluding any holidays observed by Daktronics.

   C. Daktronics shall pay ground transportation charges for the return of any defective component of the Equipment. All such items shall be shipped by End User DDP Daktronics designated facility. If returned Equipment is repaired or replaced under the terms of this Warranty, Daktronics will prepay ground transportation charges back to End User and shall ship such items DDP End User’s designated facility; otherwise, End User shall pay transportation charges to return the Equipment back to the End User and such Equipment shall be shipped Ex Works Daktronics designated facility. All returns must be pre-approved by Daktronics before shipment. Daktronics shall not be obligated to pay freight for any unapproved return. End User shall pay any upgraded or expedited transportation charges.

   D. Any replacement parts or Equipment will be new or serviceably used, comparable in function and performance to the original part or Equipment and warranted for the remainder of the Warranty Period. Purchasing additional parts or Equipment from the Seller does not extend the Warranty Period.

   E. Defects shall be defined as follows. With regard to the Equipment (excepting LEDs), a “Defect” shall refer to a material variance from the design specifications that prohibit the Equipment from operating for its intended use. With respect to LEDs, “Defects” are defined as LED pixels that cease to emit light. Unless otherwise expressly provided, this Warranty does not impose any duty or liability upon Daktronics for partial LED pixel degradation. Notwithstanding the foregoing, in no event does this Warranty include LED pixel degradation caused by UV light. This Warranty does not provide for the replacement or installation of communication methods including but not limited to, wire, fiber optic cable, conduit, trenching, or for the purpose of overcoming local site interference radio equipment substitutions.

EXCEPT AS OTHERWISE EXPRESSLY SET FORTH IN THIS WARRANTY, TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, DAKTRONICS DISCLAIMS ANY AND ALL OTHER PROMISES, REPRESENTATIONS AND WARRANTIES APPLICABLE TO THE EQUIPMENT AND REPLACES ALL OTHER WARRANTIES OR CONDITIONS, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR ACCURACY OR QUALITY OF DATA. OTHER ORAL OR WRITTEN INFORMATION OR ADVICE GIVEN BY DAKTRONICS, ITS AGENTS OR EMPLOYEES, SHALL NOT CREATE A WARRANTY OR IN ANY WAY INCREASE THE SCOPE OF THIS LIMITED WARRANTY.

THIS LIMITED WARRANTY IS NOT TRANSFERABLE.

2. Exclusion from Warranty Coverage
   This Warranty does not impose any duty or liability upon Daktronics for any:

   A. damage occurring at any time, during shipment of Equipment unless otherwise provided for in the Agreement. When returning Equipment to Daktronics for repair or replacement, End User assumes all risk of loss or damage, agrees to use any shipping containers that might be provided by Daktronics, and to ship the Equipment in the manner prescribed by Daktronics;

   B. damage caused by: (i) the improper handling, installation, adjustment, use, repair, or service of the Equipment, or (ii) any physical damage which includes, but is not limited to, missing, broken, or cracked components resulting from non-electrical causes;
altered, scratched, or fractured electronic traces; missing or gauged solder pads; cuts or clipped wires; crushed, cracked, punctured, or bent circuit boards; or tampering with any electronic connections, provided that such damage is not caused by personnel of Daktronics or its authorized repair agents;

C. damage caused by the failure to provide a continuously suitable environment, including, but not limited to: (i) neglect or misuse; (ii) improper power including, without limitation, a failure or sudden surge of electrical power; (iii) improper air conditioning, humidity control, or other environmental conditions outside of the Equipment’s technical specifications such as extreme temperatures, corrosives and metallic pollutants; or (iv) any other cause other than ordinary use;

D. damage caused by fire, flood, earthquake, water, wind, lightning or other natural disaster, strike, inability to obtain materials or utilities, war, terrorism, civil disturbance, or any other cause beyond Daktronics’ reasonable control;

E. failure to adjust, repair or replace any item of Equipment if it would be impractical for Daktronics personnel to do so because of connection of the Equipment by mechanical or electrical means to another device not supplied by Daktronics, or the existence of general environmental conditions at the site that pose a danger to Daktronics personnel;

F. statements made about the product by any salesperson, dealer, distributor or agent, unless such statements are in a written document signed by an officer of Daktronics. Such statements as are not included in a signed writing do not constitute warranties, shall not be relied upon by End User and are not part of the contract of sale;

G. damage arising from the use of Daktronics products in any application other than the commercial and industrial applications for which they are intended, unless, upon request, such use is specifically approved in writing by Daktronics;

H. replenishment of spare parts. In the event the Equipment was purchased with a spare parts package, the parties acknowledge and agree that the spare parts package is designed to exhaust over the life of the Equipment, and as such, the replenishment of the spare parts package is not included in the scope of this Warranty;

I. security or functionality of the End User’s network or systems, or anti-virus software updates;

J. performance of preventive maintenance;

K. third-party systems and other ancillary equipment, including without limitation front-end video control systems, audio systems, video processors and players, HVAC equipment, batteries and LCD screens;

L. incorporation of accessories, attachments, software or other devices not furnished by Daktronics; or

M. paint or refinishing the Equipment or furnishing material for this purpose.

3. Limitation of Liability

A. Daktronics shall be under no obligation to furnish continued service under this Warranty if alterations are made to the Equipment without the prior written approval of Daktronics.

B. It is specifically agreed that the price of the Equipment is based upon the following limitation of liability. In no event shall Daktronics (including its subsidiaries, affiliates, officers, directors, employees, or agents) be liable for any claims asserting or based on (a) loss of use of the facility or equipment; lost business, revenues, or profits; loss of goodwill; failure or increased cost of operations; loss, damage or corruption of data; loss resulting from system or service failure, malfunction, incompatibility, or breaches in system security; or (b) any special, consequential, incidental or exemplary damages arising out of or in any way connected with the Equipment or otherwise, including but not limited to damages for lost profits, cost of substitute or replacement equipment, down time, injury to property or any damages or sums paid to third parties, even if Daktronics has been advised of the possibility of such damages. The foregoing limitation of liability shall apply whether any claim is based upon principles of contract, tort or statutory duty, principles of indemnity or contribution, or otherwise

C. In no event shall Daktronics be liable for loss, damage, or injury of any kind or nature arising out of or in connection with this Warranty in excess of the Purchase Price of the Equipment. The End User’s remedy in any dispute under this Warranty shall be ultimately limited to the Purchase Price of the Equipment to the extent the Purchase Price has been paid.

4. Assignment of Rights

A. The Warranty contained herein extends only to the End User (which may be the Purchaser) of the Equipment and no attempt to extend the Warranty to any subsequent user-transferee of the Equipment shall be valid or enforceable without the express written consent of Daktronics.

5. Governing Law; Election of Remedies

A. The rights and obligations of the parties under this Warranty shall not be governed by the provisions of the United Nations Convention on Contracts for the International Sale of Goods of 1980. The parties consent to the application of the laws of the State of South Dakota to govern, interpret, and enforce each of the parties’ rights, duties, and obligations arising from, or relating in any manner to, the subject matter of this Warranty, without regard to conflict of law principles.

B. Any dispute, controversy or claim arising from or related to this Warranty, the parties shall first attempt to settle through negotiations. In the event that no resolution is reached, then such dispute, controversy, or claim shall be resolved by final and binding arbitration under the Rules of Arbitration of the International Chamber of Commerce. The language of the arbitration
shall be English. The place of the arbitration shall be Sioux Falls, SD. A single arbitrator selected by the parties shall preside over the proceeding. If a single arbitrator cannot be agreed upon by the parties, each party shall select an arbitrator, and those arbitrators shall confer and agree on the appointed arbitrator to adjudicate the arbitration. The arbitrator shall have the power to grant any provisional or final remedy or relief that it deems appropriate, including conservatory measures and an award of attorneys’ fees. The arbitrator shall make its decisions in accordance with applicable law. By agreeing to arbitration, the Parties do not intend to deprive any court of its jurisdiction to issue a pre-arbitral injunction, pre-arbitral attachment, or other order in aid of arbitration proceedings and the enforcement of any award. Without prejudice to such provisional remedies as may be available under the jurisdiction of a court, the arbitrator shall have full authority to grant provisional remedies and to direct the Parties to request that any court modify or vacate any temporary or preliminary relief issued by such court, and to award damages for the failure of any Party to respect the arbitrator’s orders to that effect.

6. Availability of Extended Service Agreement

A. For End User’s protection, in addition to that afforded by the warranties set forth herein, End User may purchase extended warranty services to cover the Equipment. The Extended Service Agreement, available from Daktronics, provides for electronic parts repair and/or on-site labor for an extended period from the date of expiration of this warranty. Alternatively, an Extended Service Agreement may be purchased in conjunction with this Warranty for extended additional services. For further information, contact Daktronics Customer Service at 1-800-DAKTRONics (1-800-325-8766).

Additional Terms applicable to sales outside of the United States

The following additional terms apply only where the installation site of the Equipment is located outside of the United States of America.

1. In the event that the installation site of the Equipment is in a country other than the U.S.A., then, notwithstanding Section 5 of the Warranty, where the selling entity is the entity listed in Column 1, then the governing law of this Warranty is the law of the jurisdiction listed in the corresponding row in Column 2 without regard to its conflict of law principles. Furthermore, if the selling entity is an entity listed in Column 1, then the place of arbitration is listed in the corresponding row in Column 3.
