The RC-200 handheld controller is a truly wireless device that can control a variety of applications, one of those being a scoring device for Diving and Rodeo judges. Judges’ scores are entered into the handheld, received via a wireless base station, and sent to the OmniSport® 2000 timing console where the scores can be displayed on a numeric scoreboard or LED message center.

Up to 9 handheld controllers may operate per base station. An additional receiver may be used to accommodate more judges.

The handheld unit operates using a 2.4 GHz radio with internal antenna and features 64 selectable channels to minimize radio interference. Rechargeable Ni-MH (Nickel Metal Hydride) battery provides 8-10 hours of operation on a full charge.
