

# Venus® 1500

## SOFTWARE WEB BASED TRAINING

Effectively maintaining content on a display may cause hesitation for you. Daktronics Venus® 1500 webinar training provides you with the option of effective, convenient, and non-threatening sessions when and where you choose.

### WHAT ARE WEBINAR TRAININGS?

- Live training that utilizes a training website and telephone instruction simultaneously.
- All that you need is a telephone line, Internet connection and Web browser (such as Internet Explorer).
- You do not need to have the Venus® 1500 software installed on your computers.
- Webinars last approximately two hours.
- A recording of the session will be sent following the webinar.

### WHAT ARE THE BENEFITS OF WEBINARS?

- The webinar trainer customizes the training based on your computer skill level.
- Schedule a webinar at a convenient time for you.
- Choose the training site—no traveling.
- The one-on-one training is interactive—as the trainer uses the screen, you are free to ask questions over the phone.
- Webinars respect your time; if less time is needed, the two-hour session can be shortened.
- Webinar trainers make every effort to customize the training to your niche and display type. (For example, if you are operating a display at a bank, the trainer will use financial-related text, graphics and applications for the specific model and matrix of the display.)
- Daktronics' professional trainers are friendly and informal for a relaxed, stress-free session.
